# NATURAL VERTICAL GARDEN

## INNOVATIVE HYDROPONIC BLANKET SYSTEM

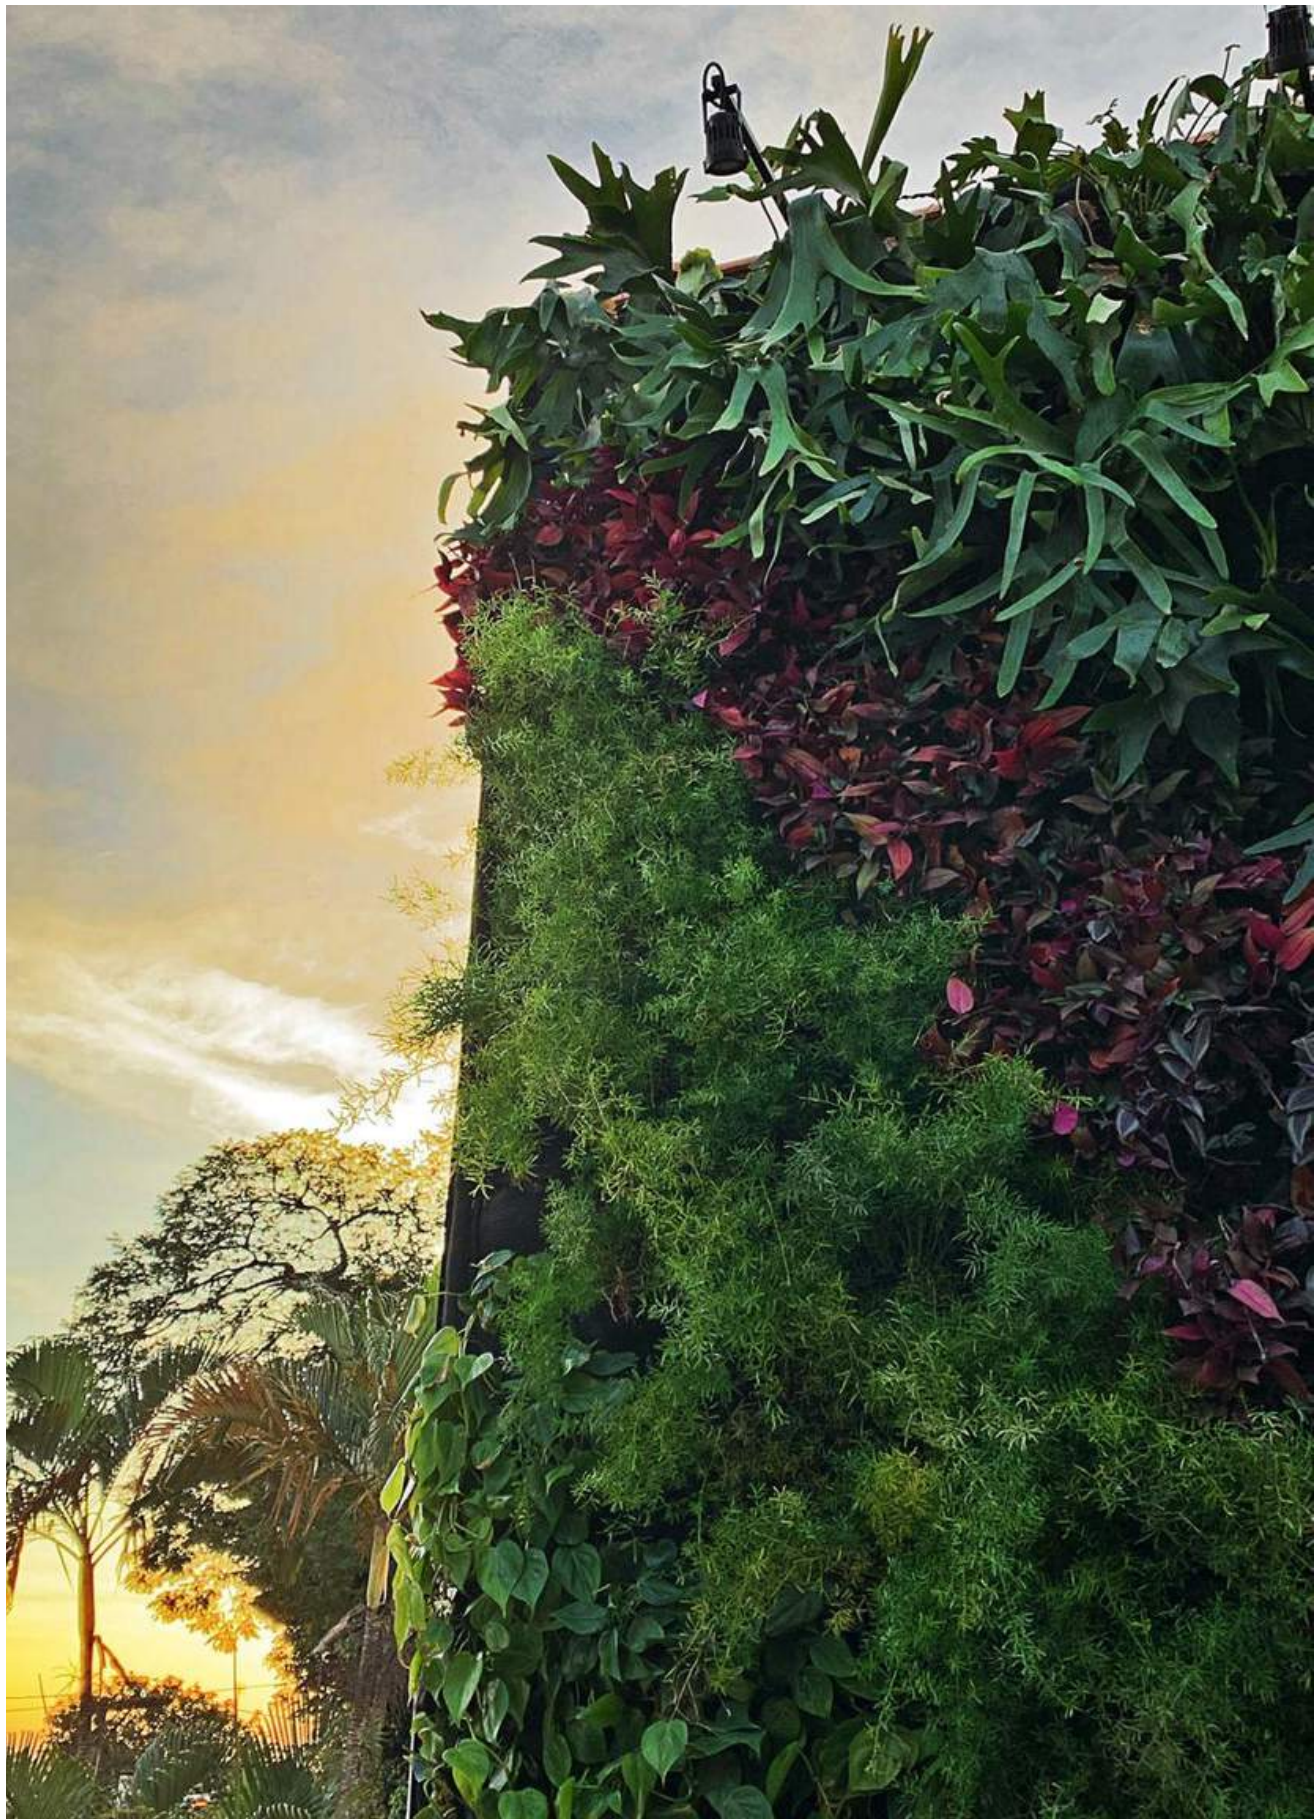

*Originated in Europe and with strong growth in Brazil, the hydroponic blanket garden is the most efficient vertical landscaping system in the world. Produced in custom-made modular panels and with Biophilic Design exclusive to each project, the gardens are also "smart walls", have an automated irrigation system with an option for remote monitoring via Wifi (application).*

# NATURAL VERTICAL GARDEN

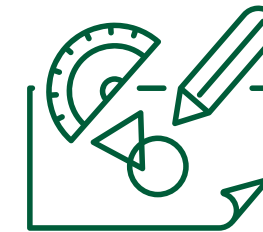

natural vertical landscaping and its benefits

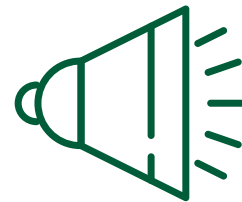

planting in innovative  
hydroponic blanket system

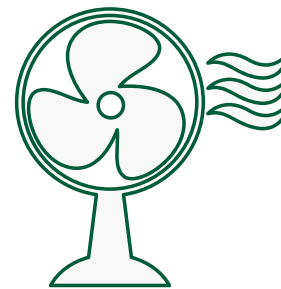

automated irrigation  
*with monitoring option*  
*remote via wifi*

biophilic design  
customized for  
your project

natural acoustic barrier

improvement in air quality  
and ambient humidity

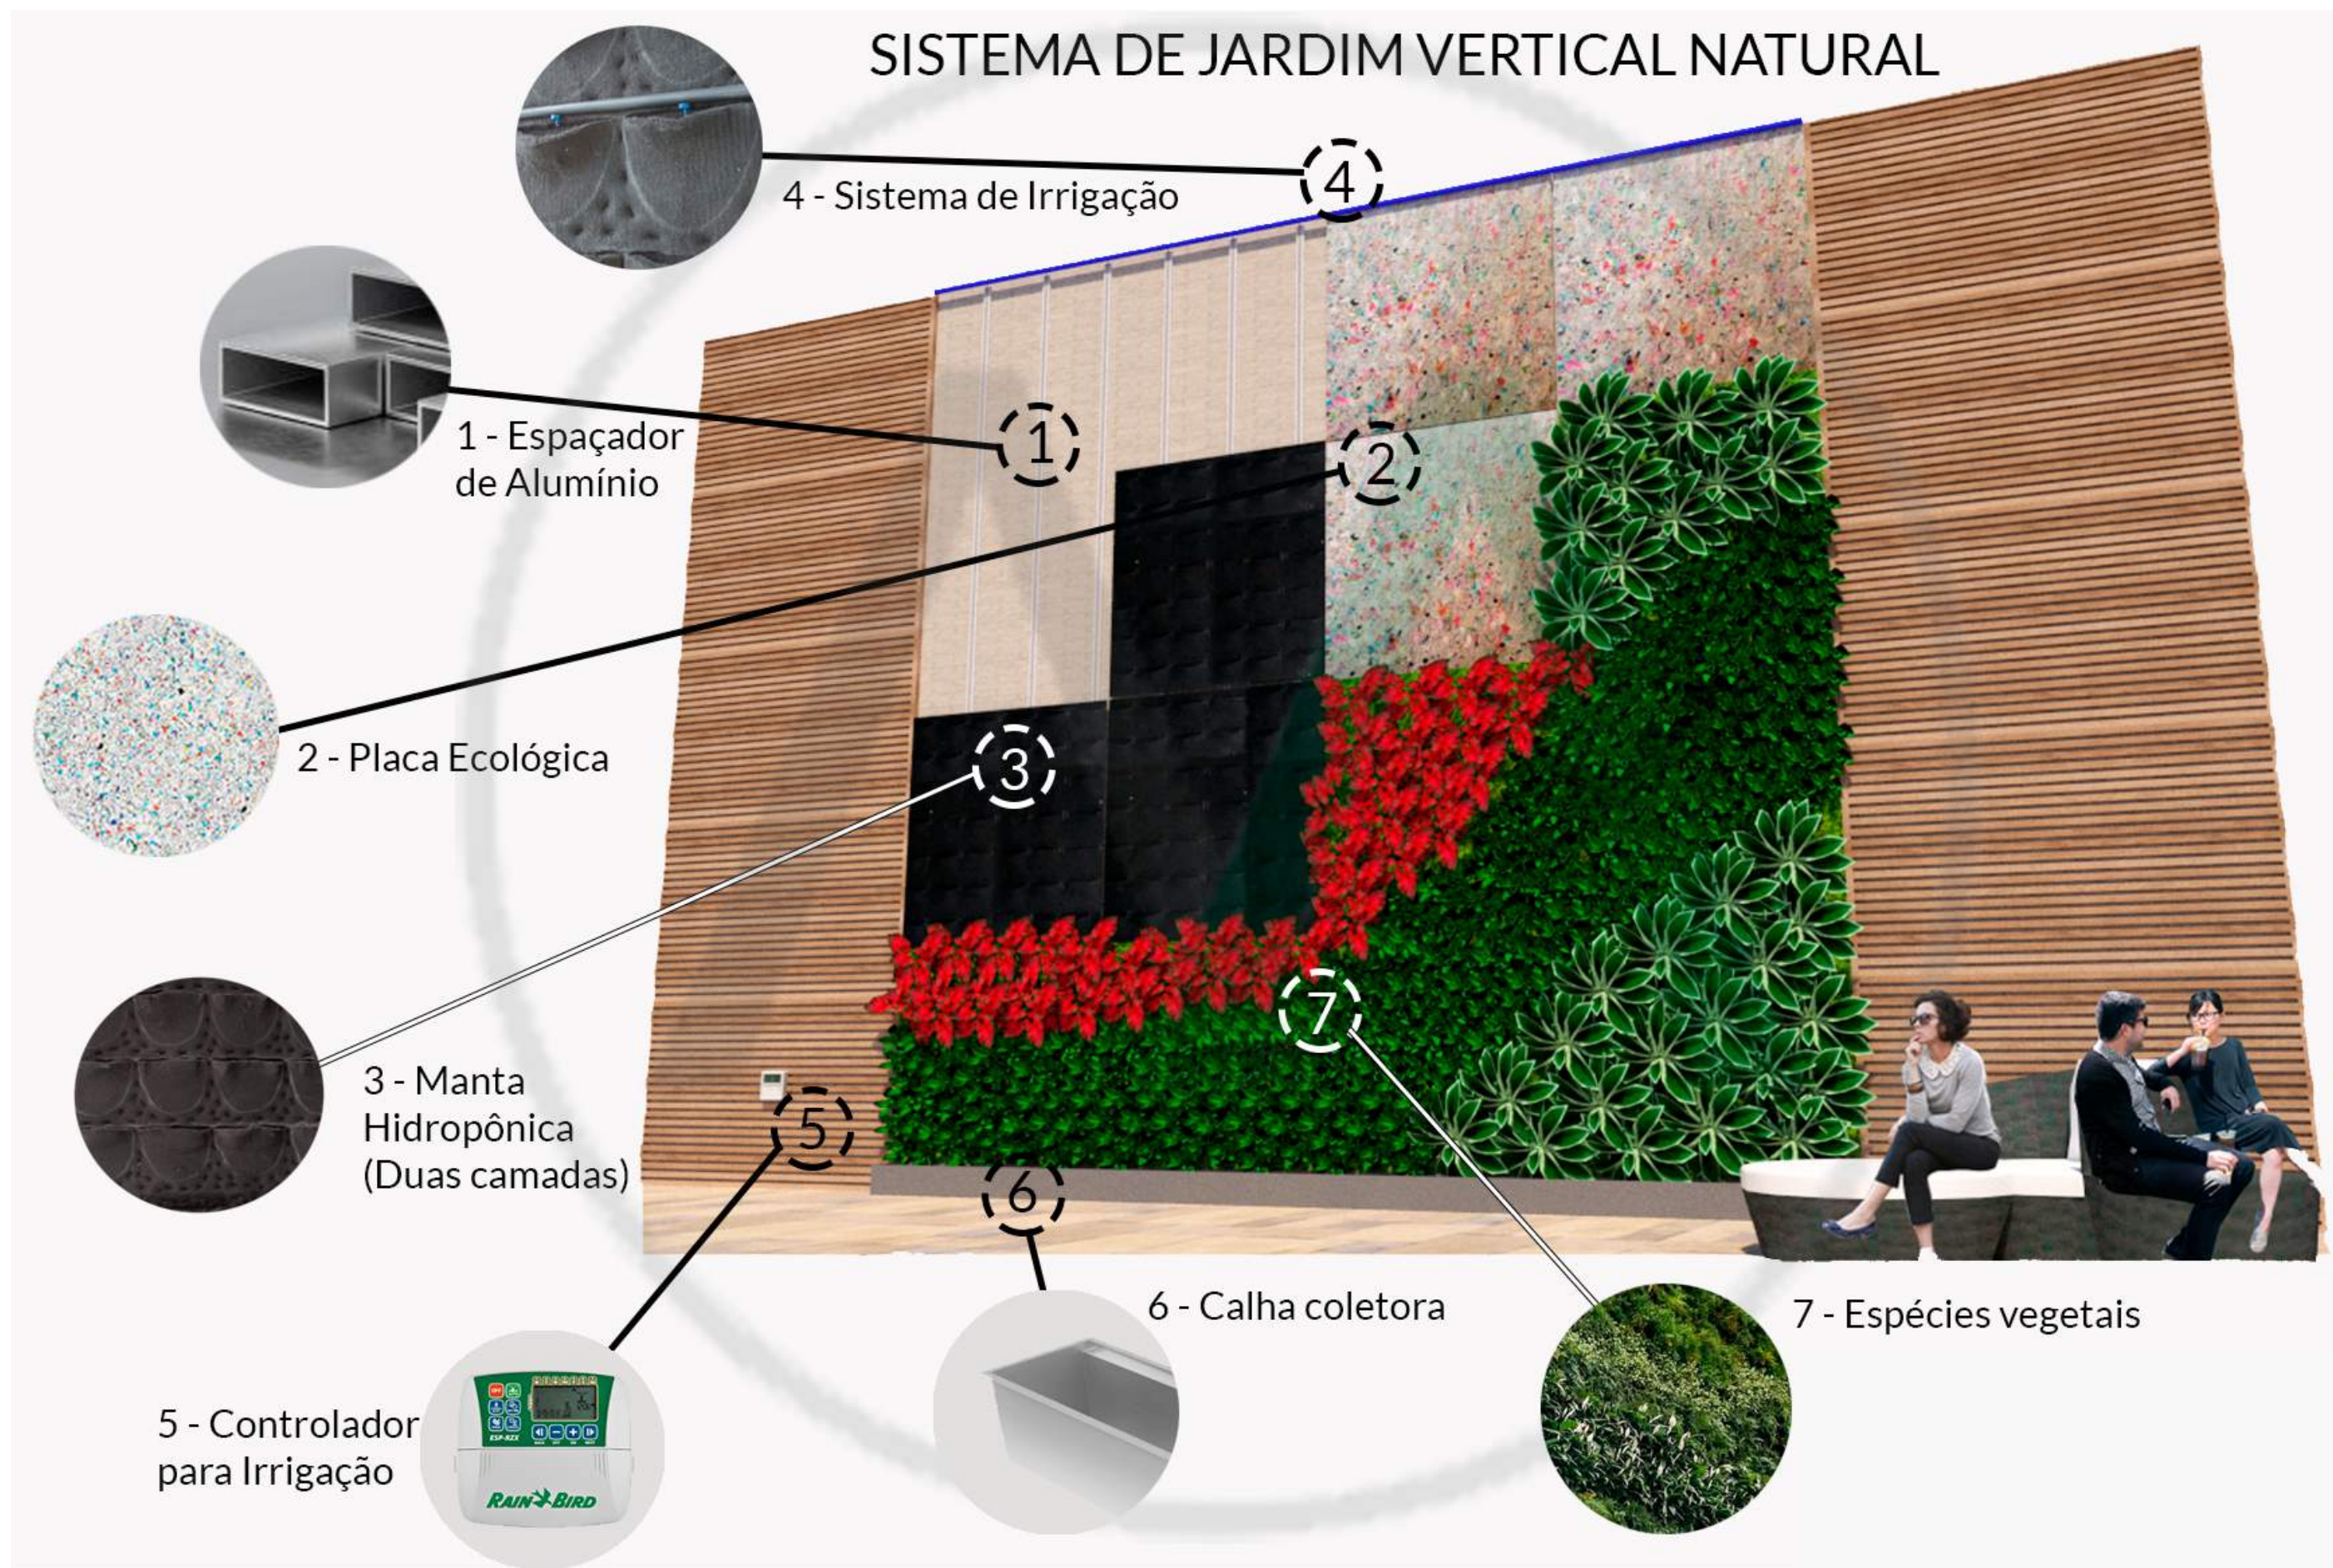

psychological well-being  
and proximity to nature

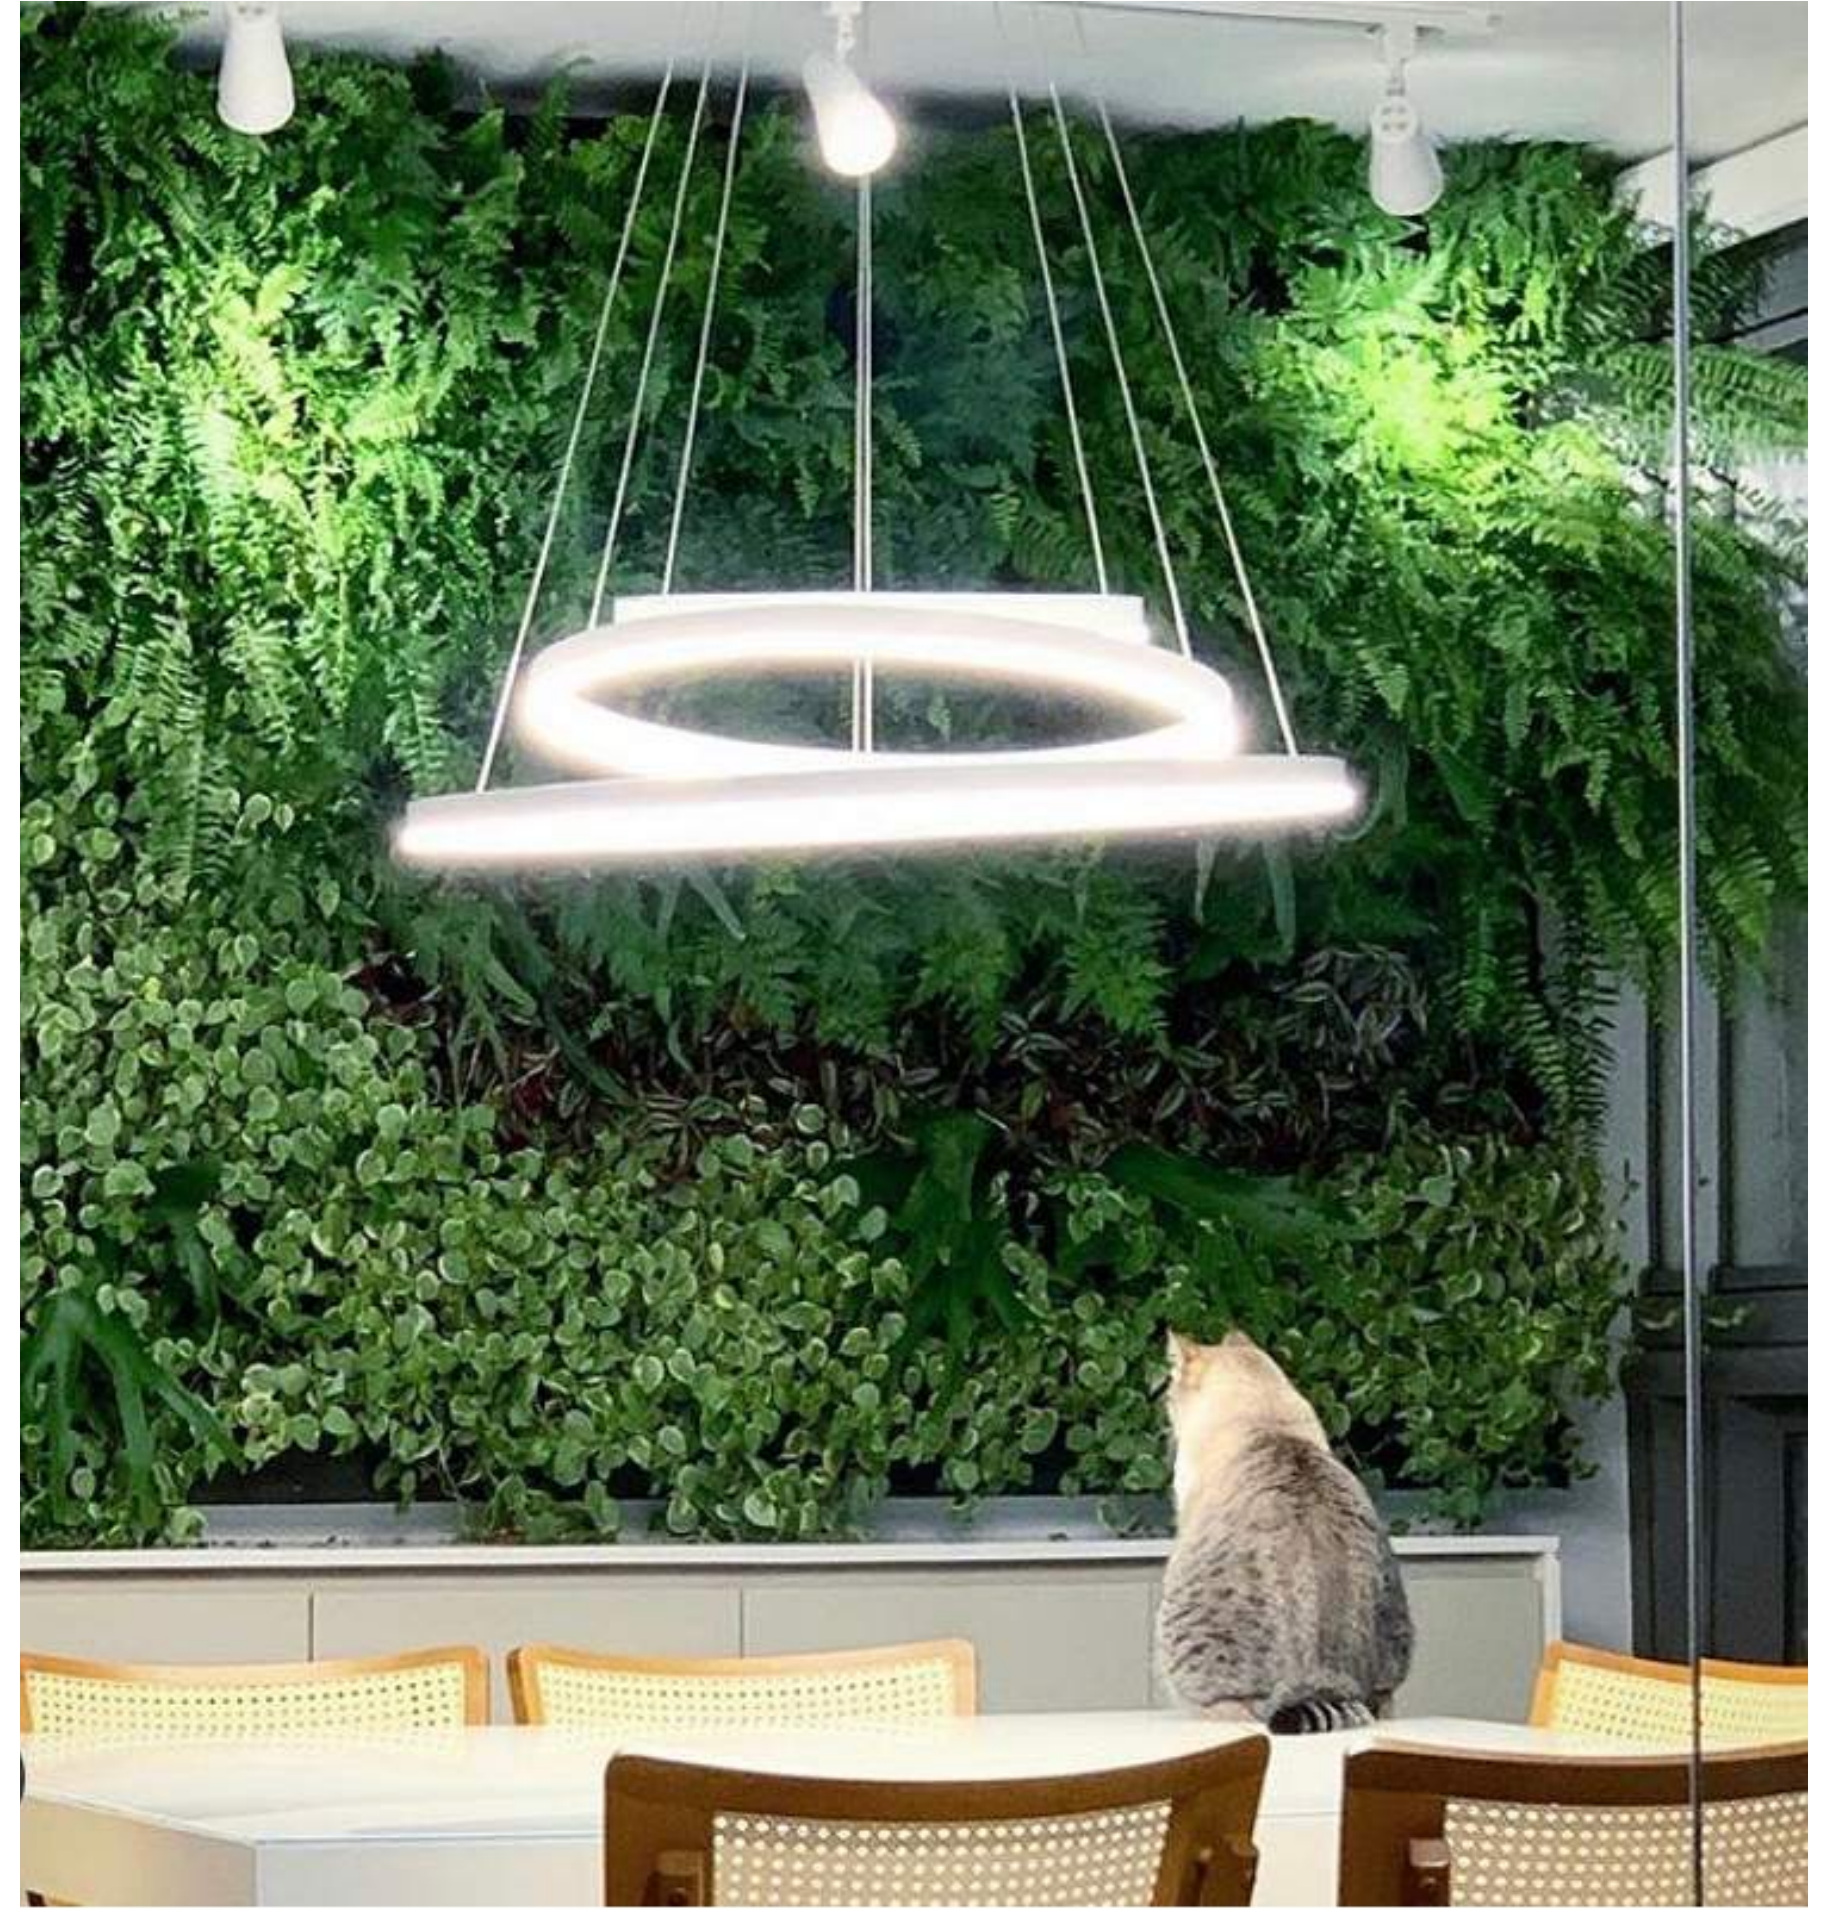

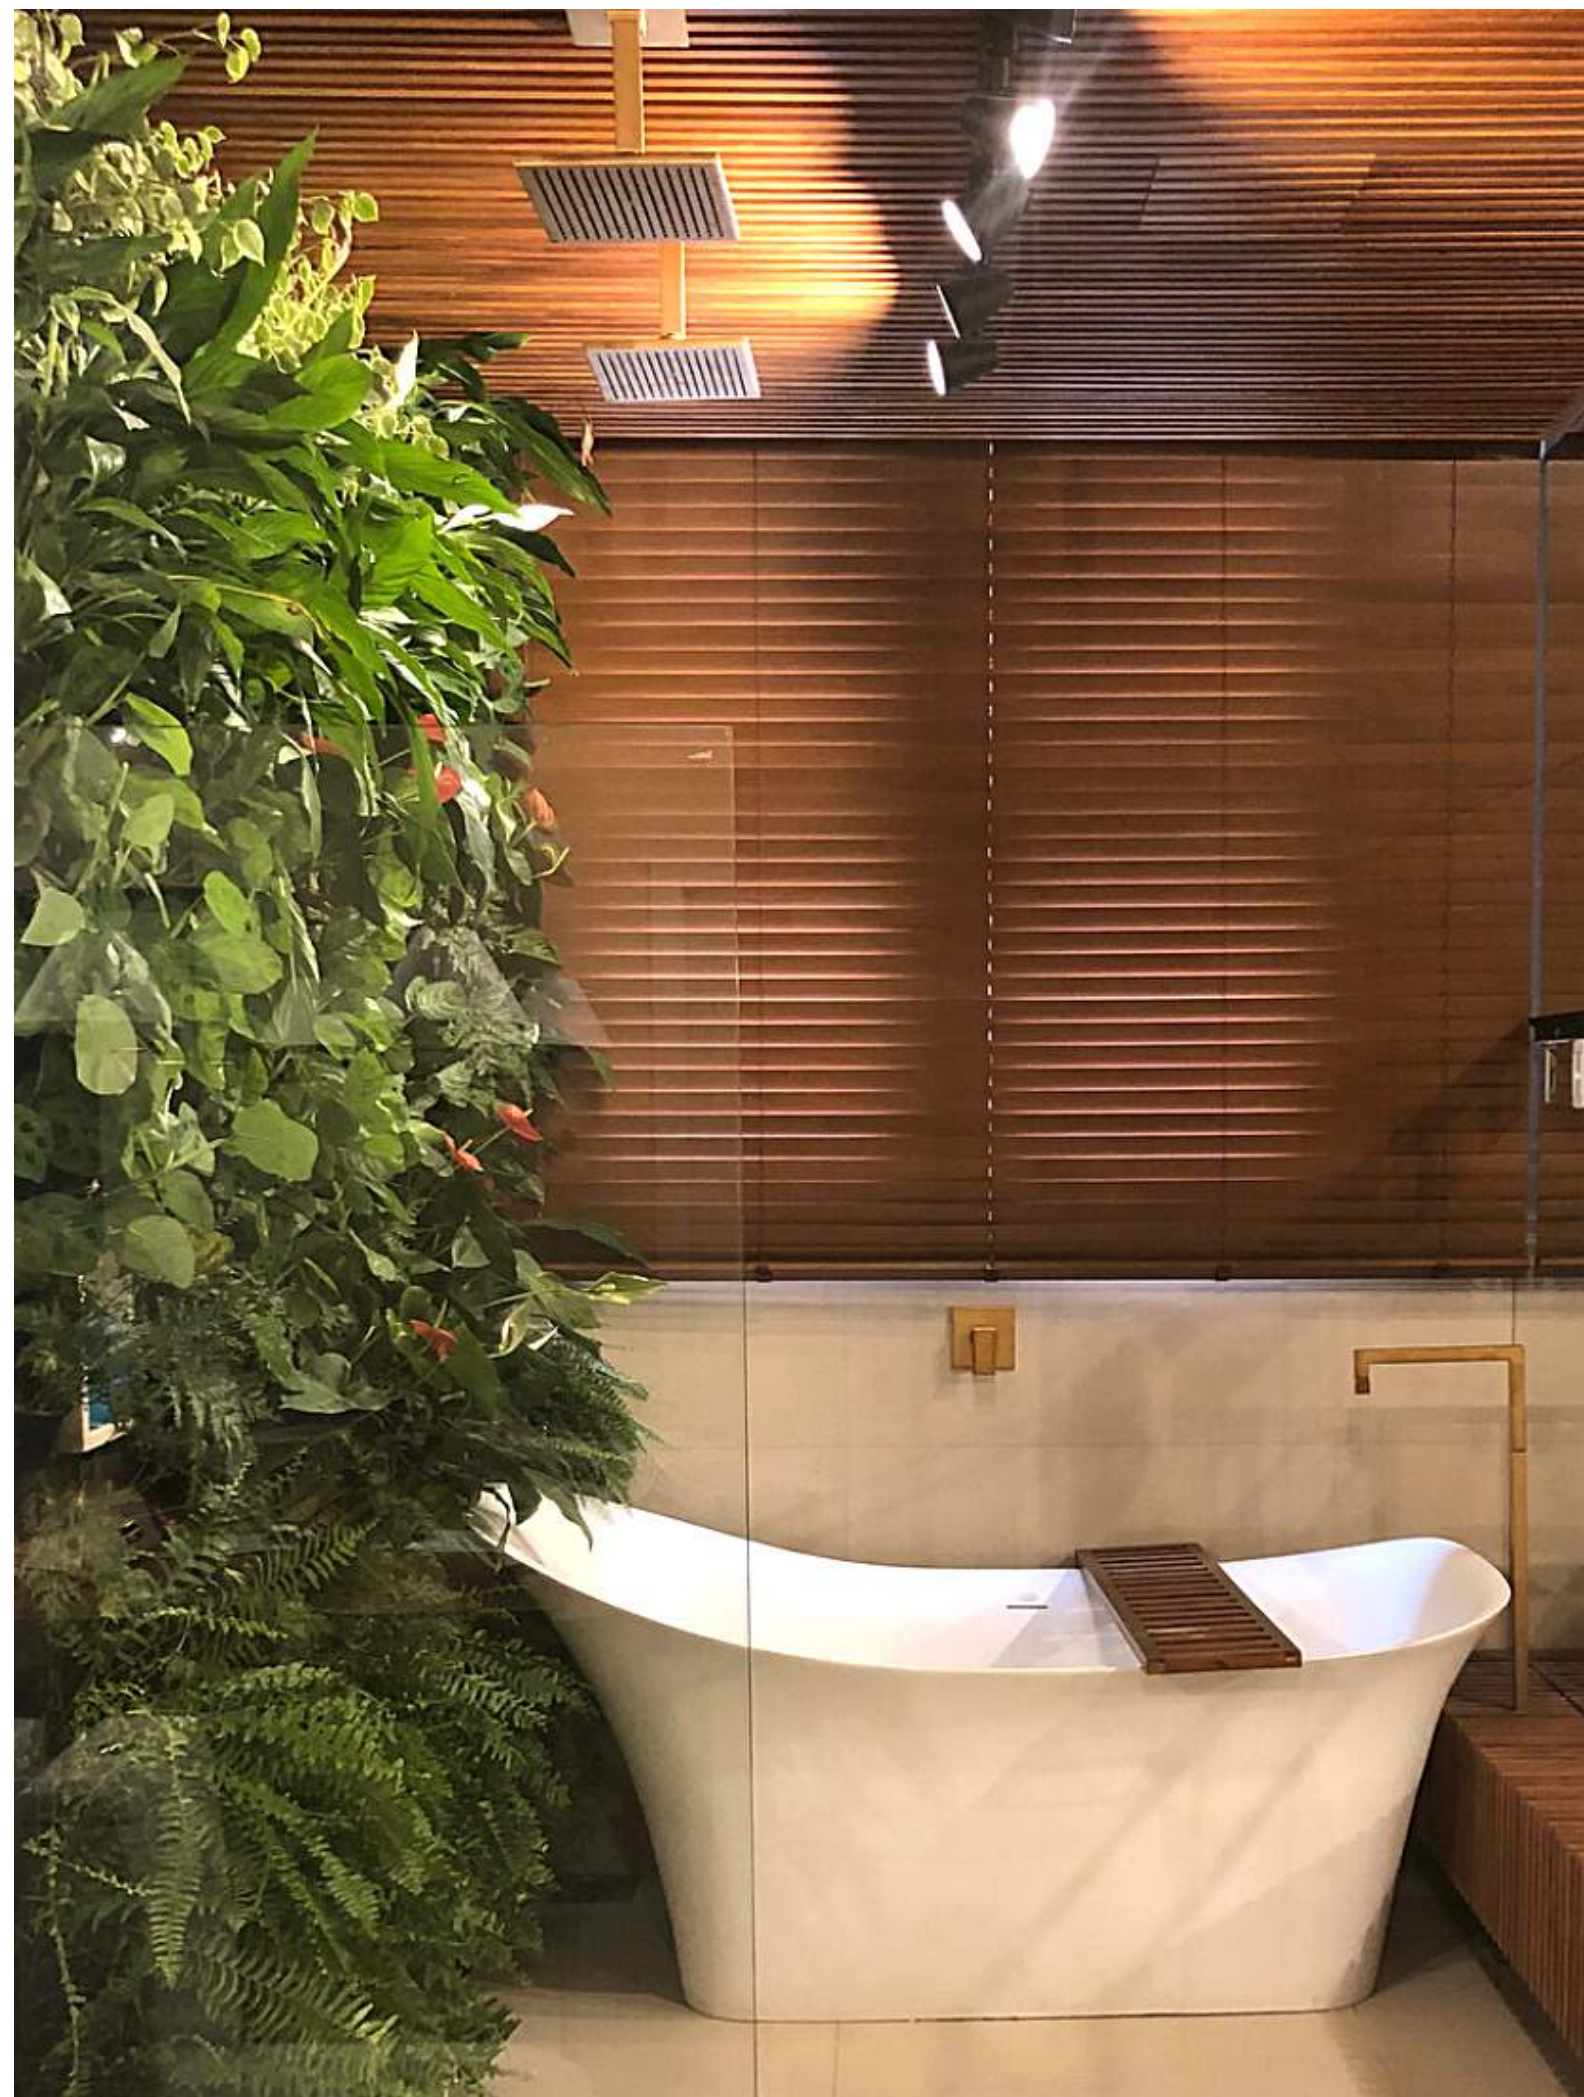

# INSTALLATION

## SUSTAINABLE INSTALLATION WITHOUT RISKS

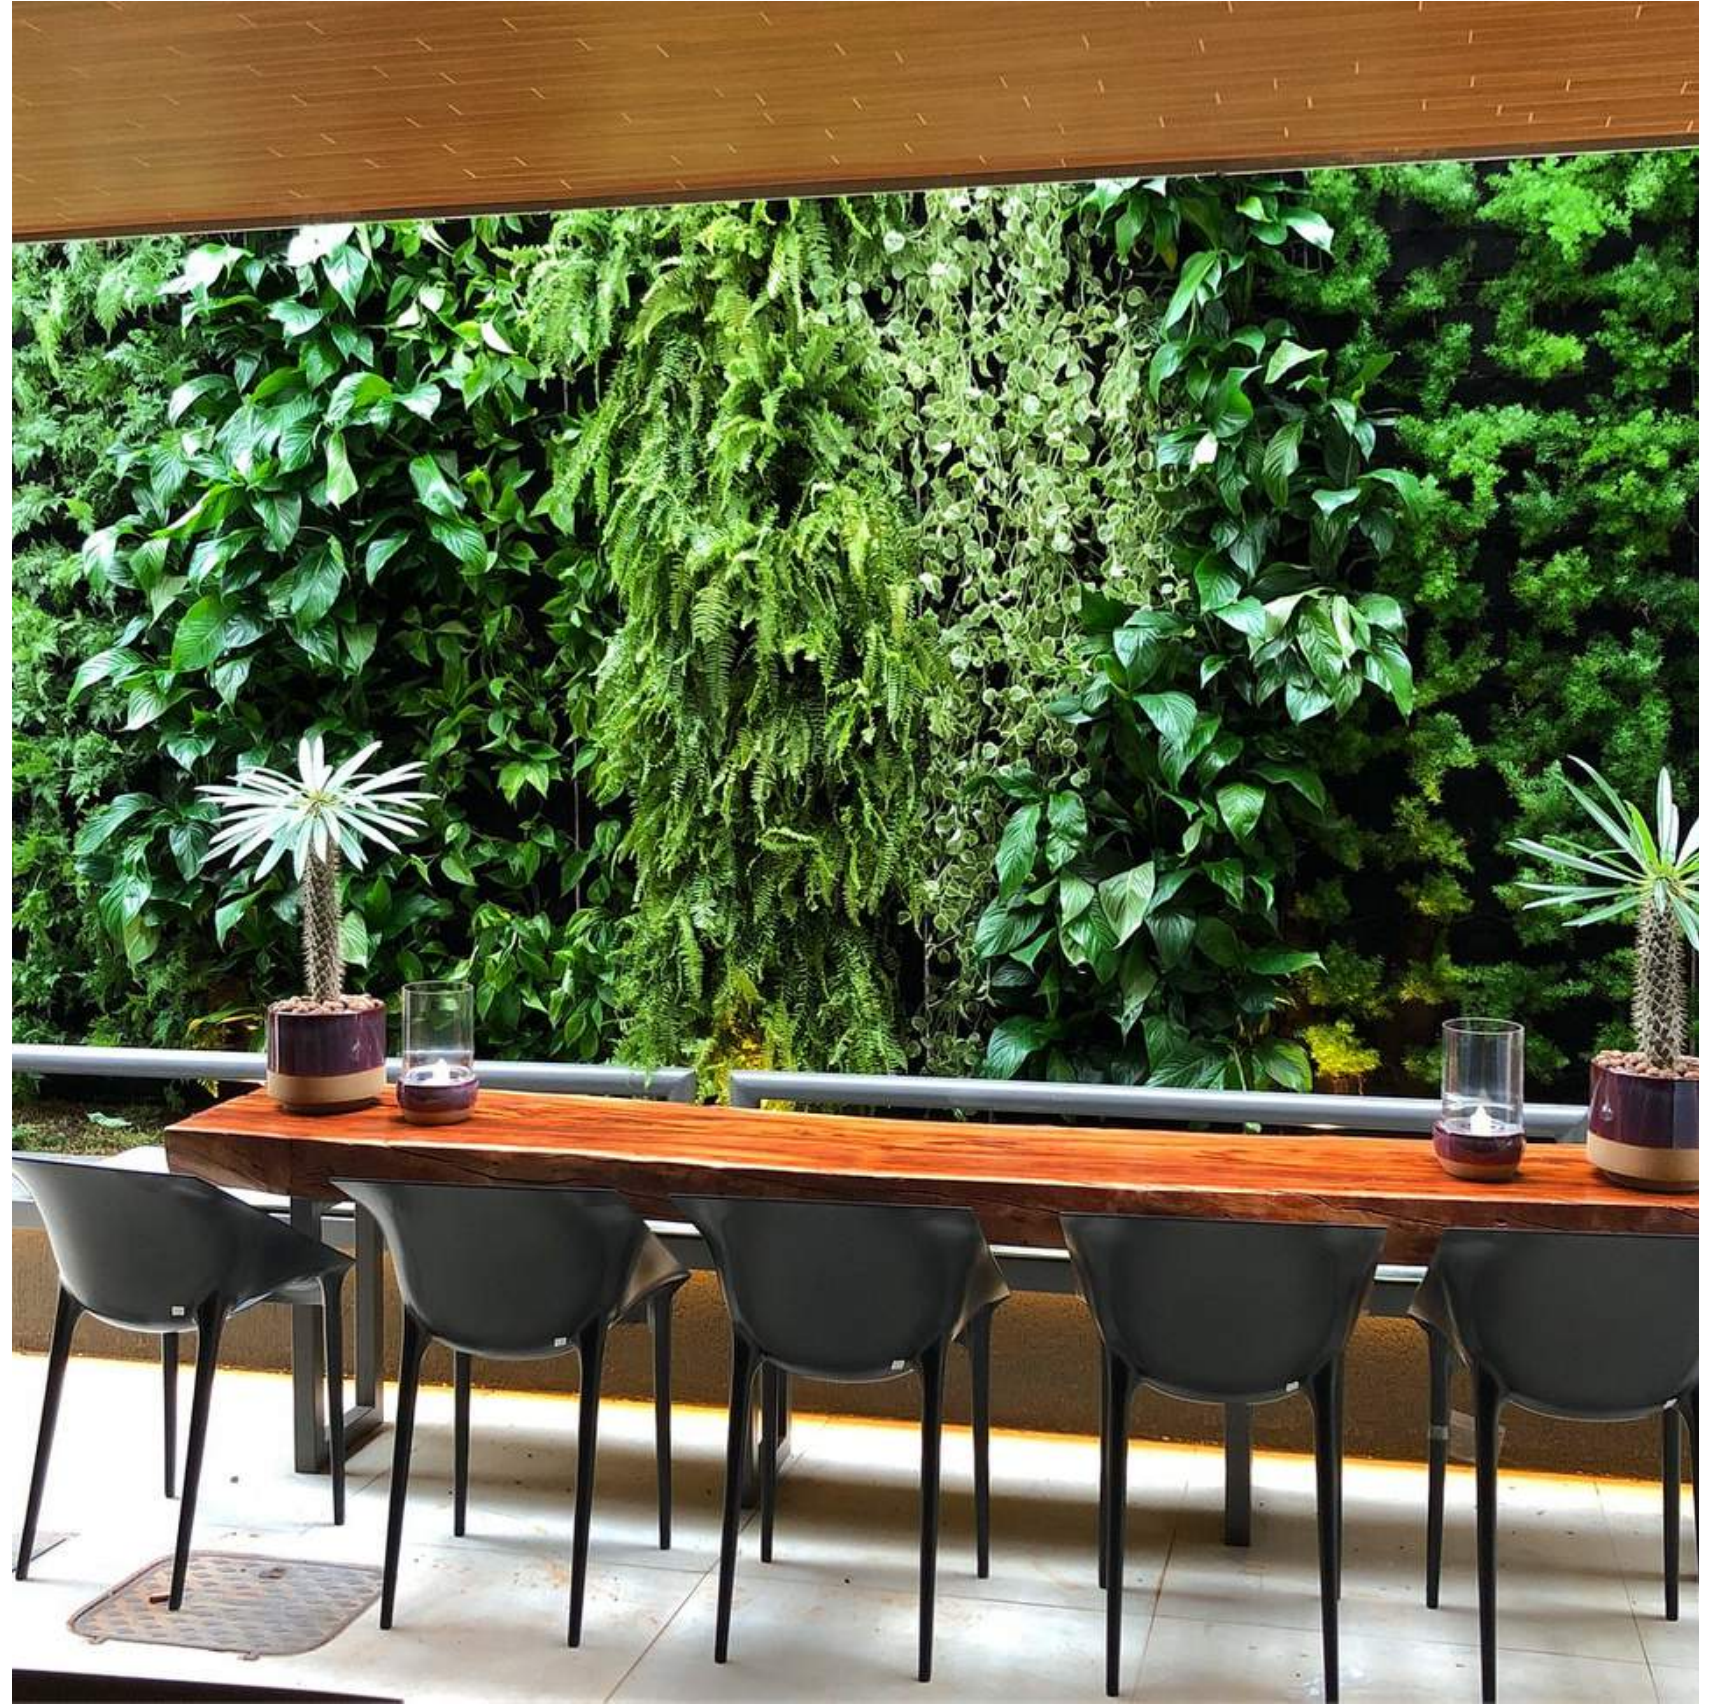

The installation process starts with fixing aluminum spacers to the wall, eliminating infiltration risks. Next, we have the assembly of the waterproof ecological plates, accompanied by the double layer of hydroponic blanket. Right after assembling the structure, we installed and tested the entire irrigation system (gutter, hoses, drippers and the controller timer). Once this is done, we start planting the seedlings, according to the project previously approved by the client.

***For the installation of the Natural Vertical Garden it is necessary: water point, drain and electric energy (in the absence, we use battery).***

Guarantee: 60 days for the vegetation and 180 days for the structure.

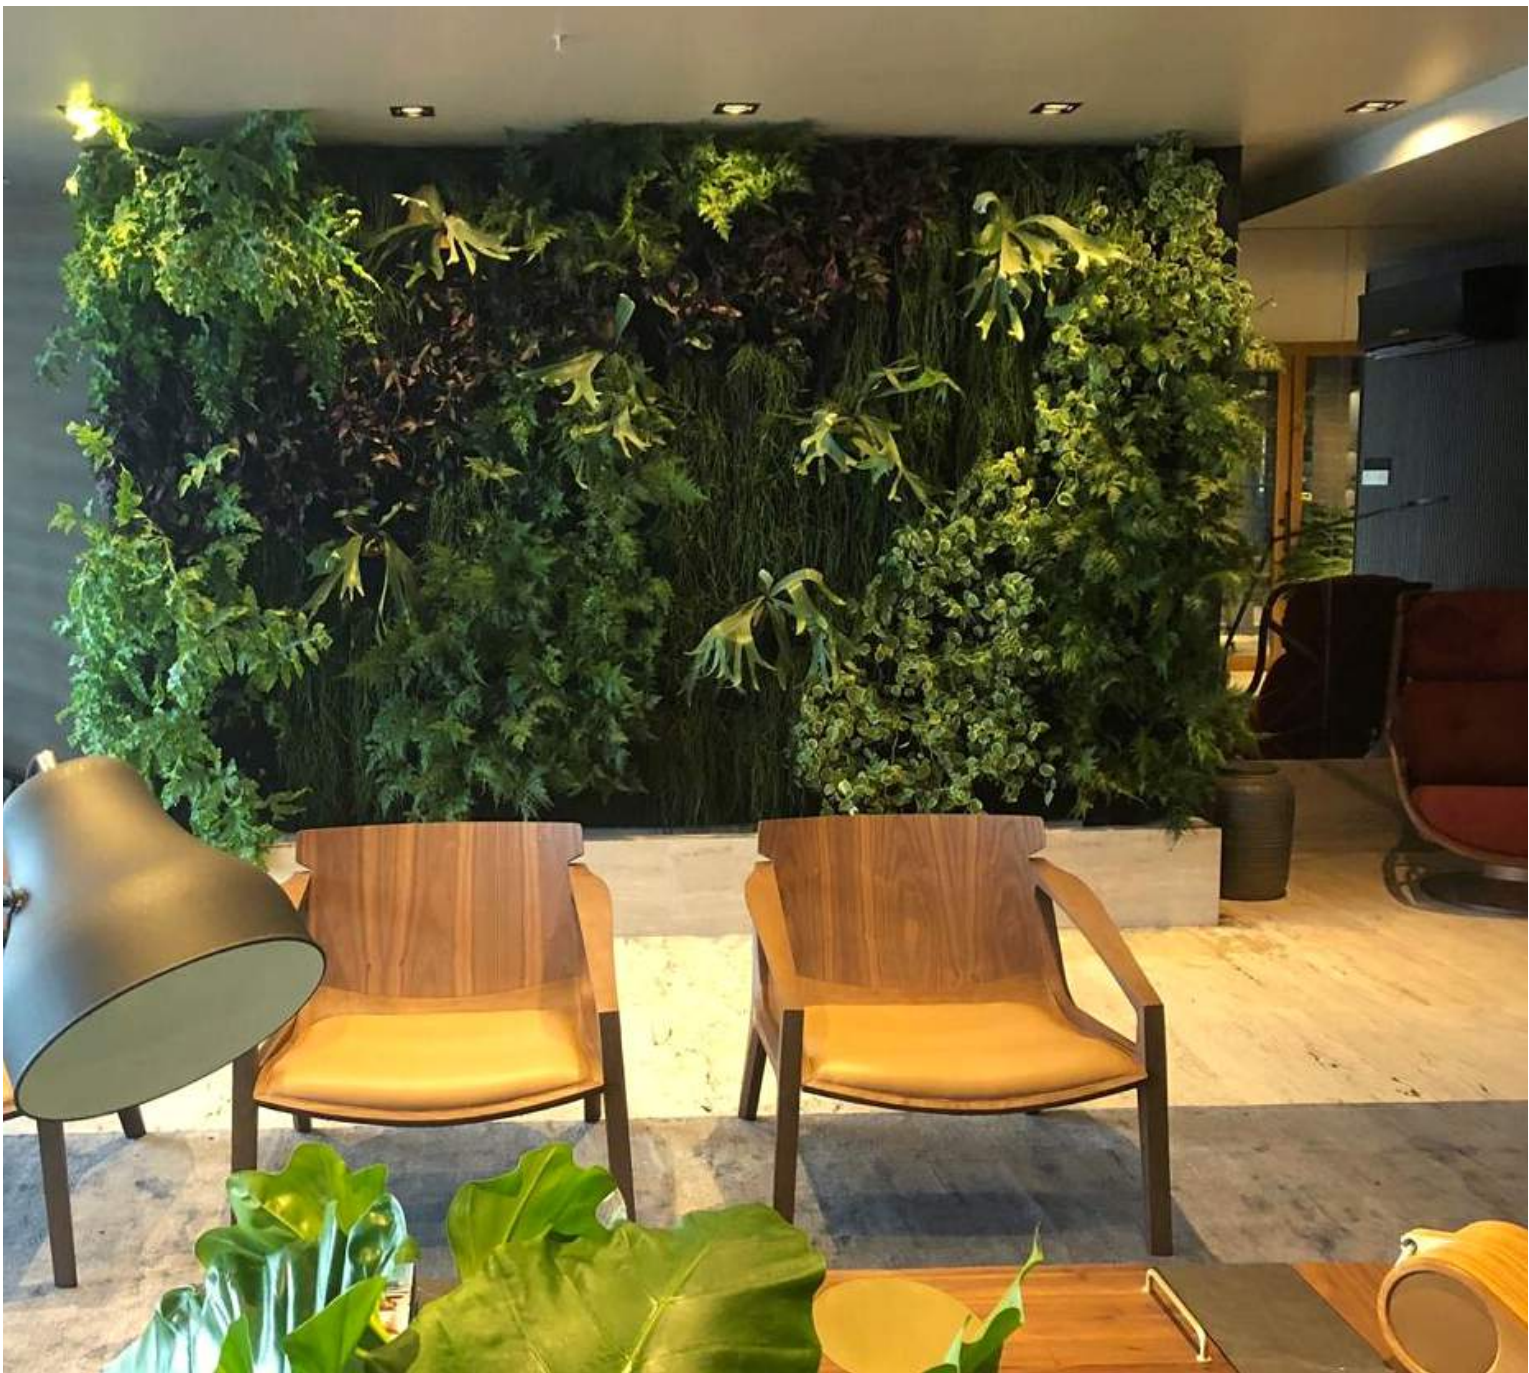

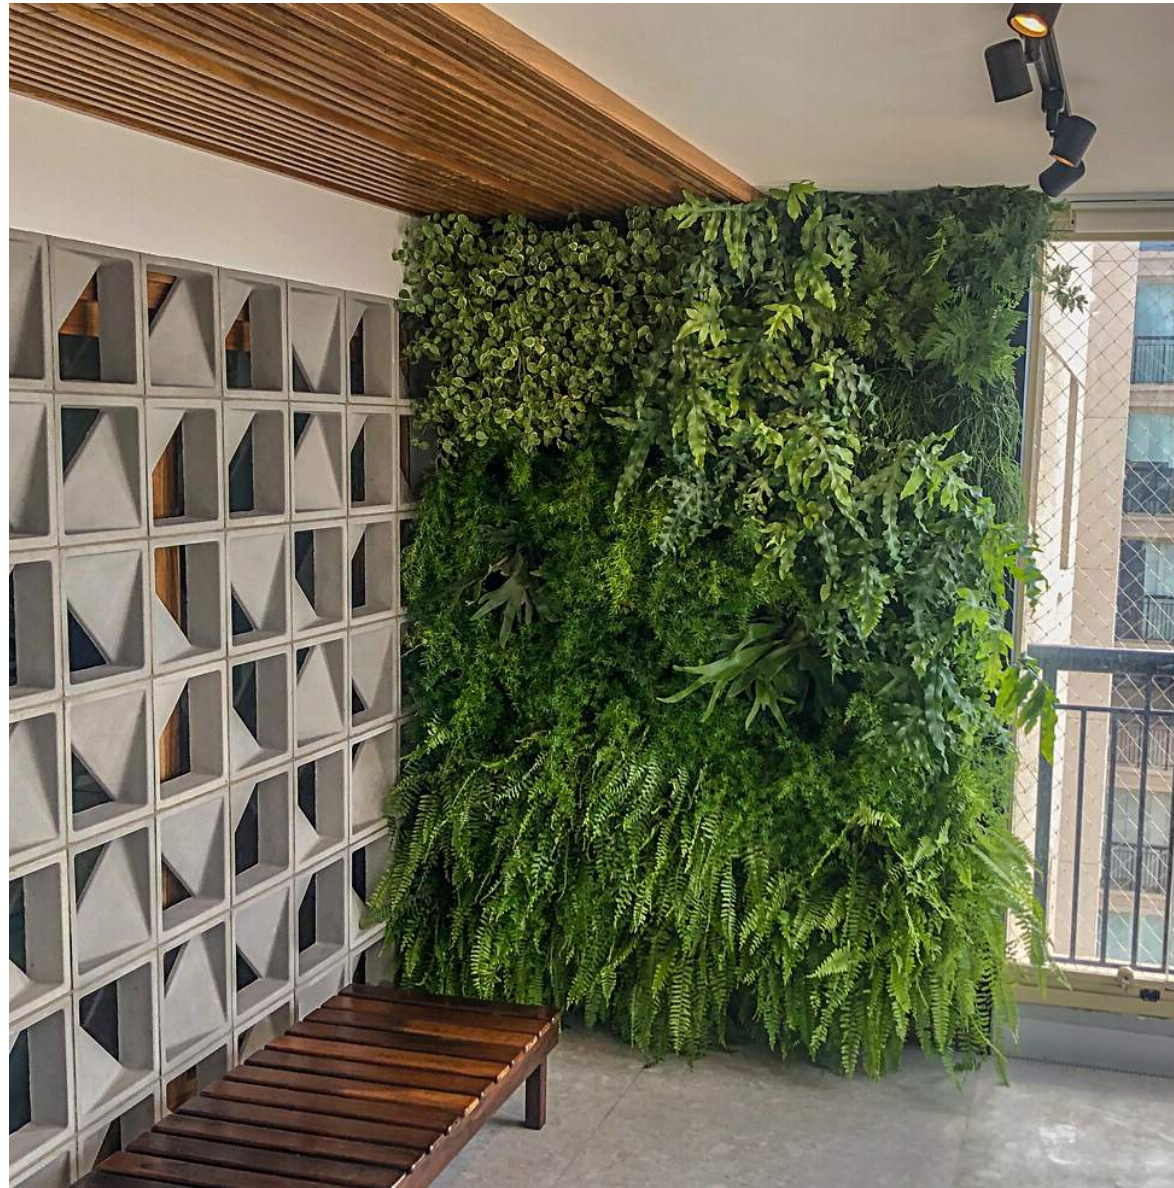

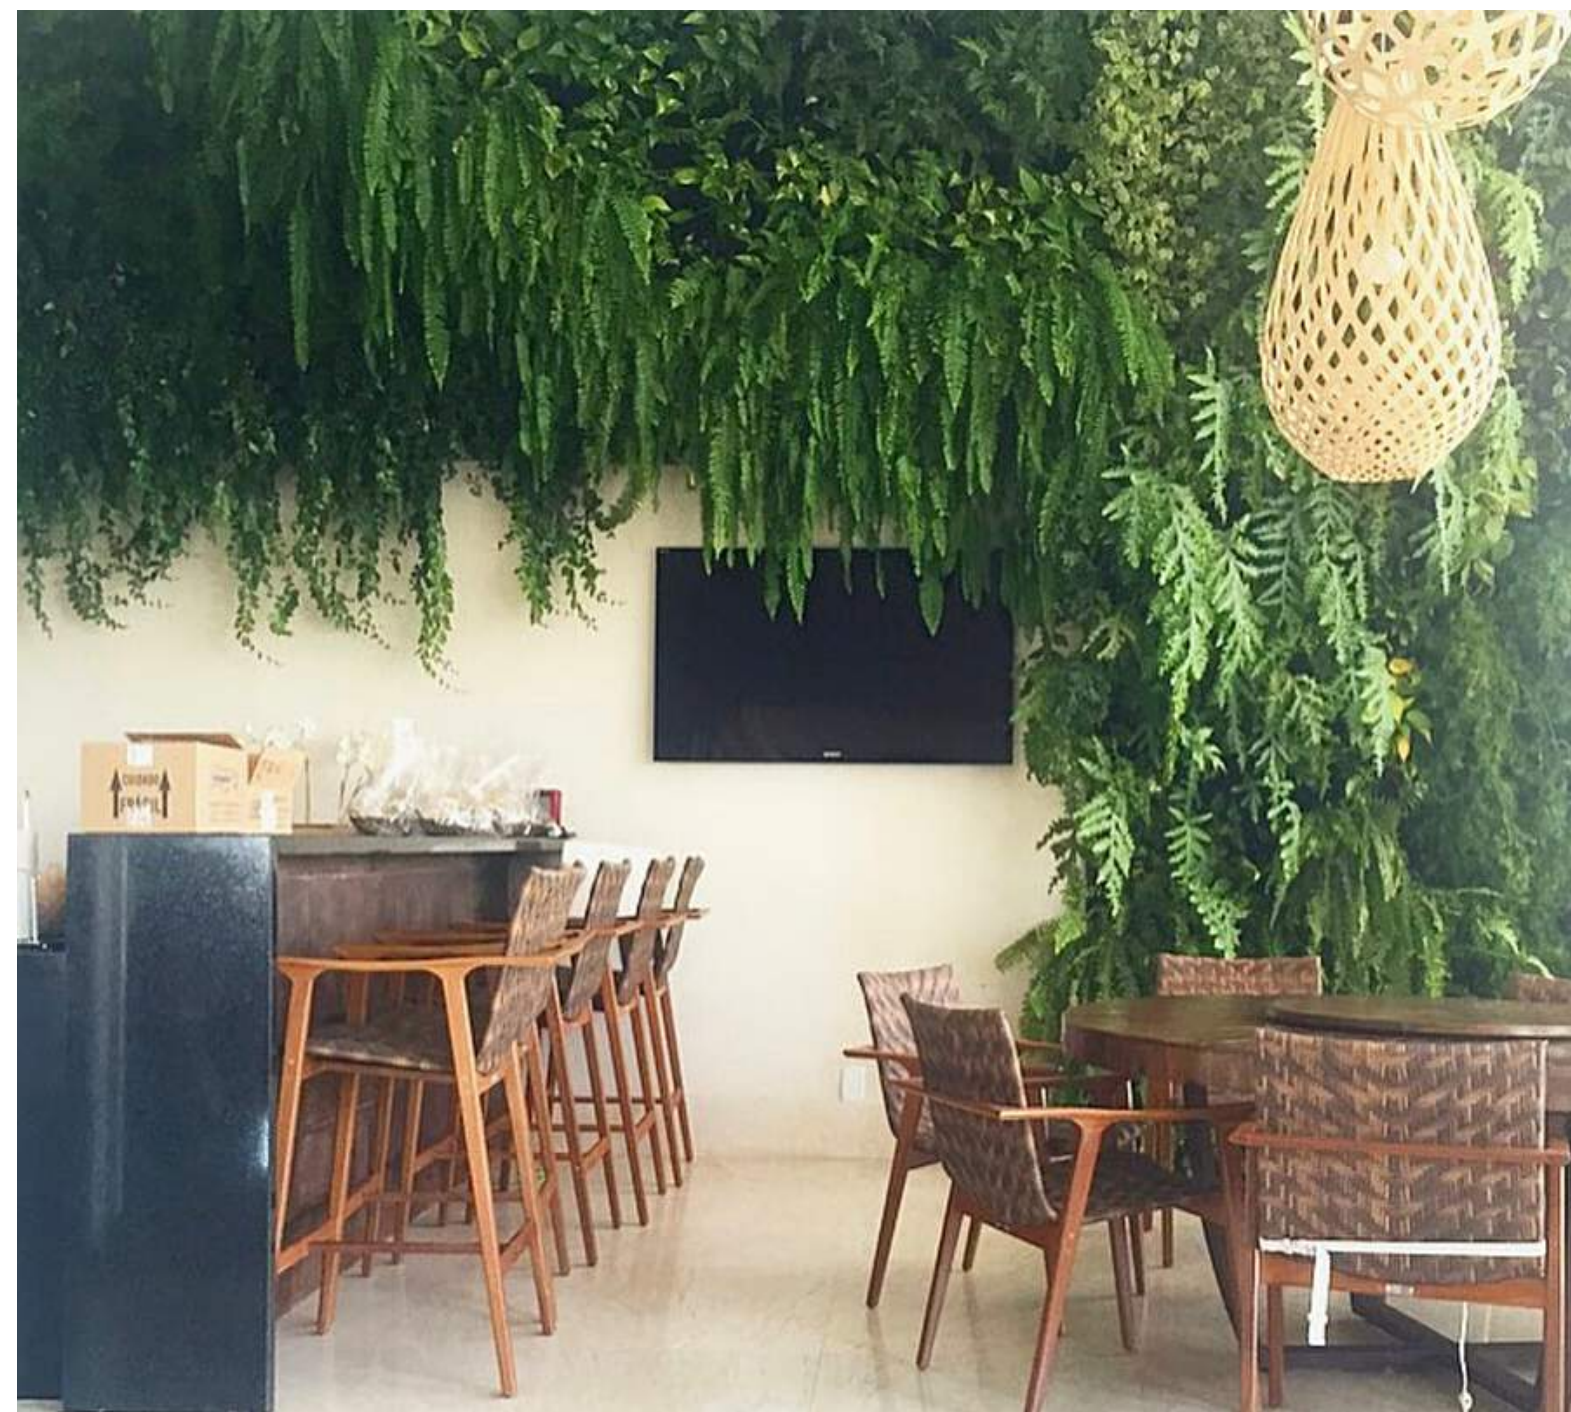

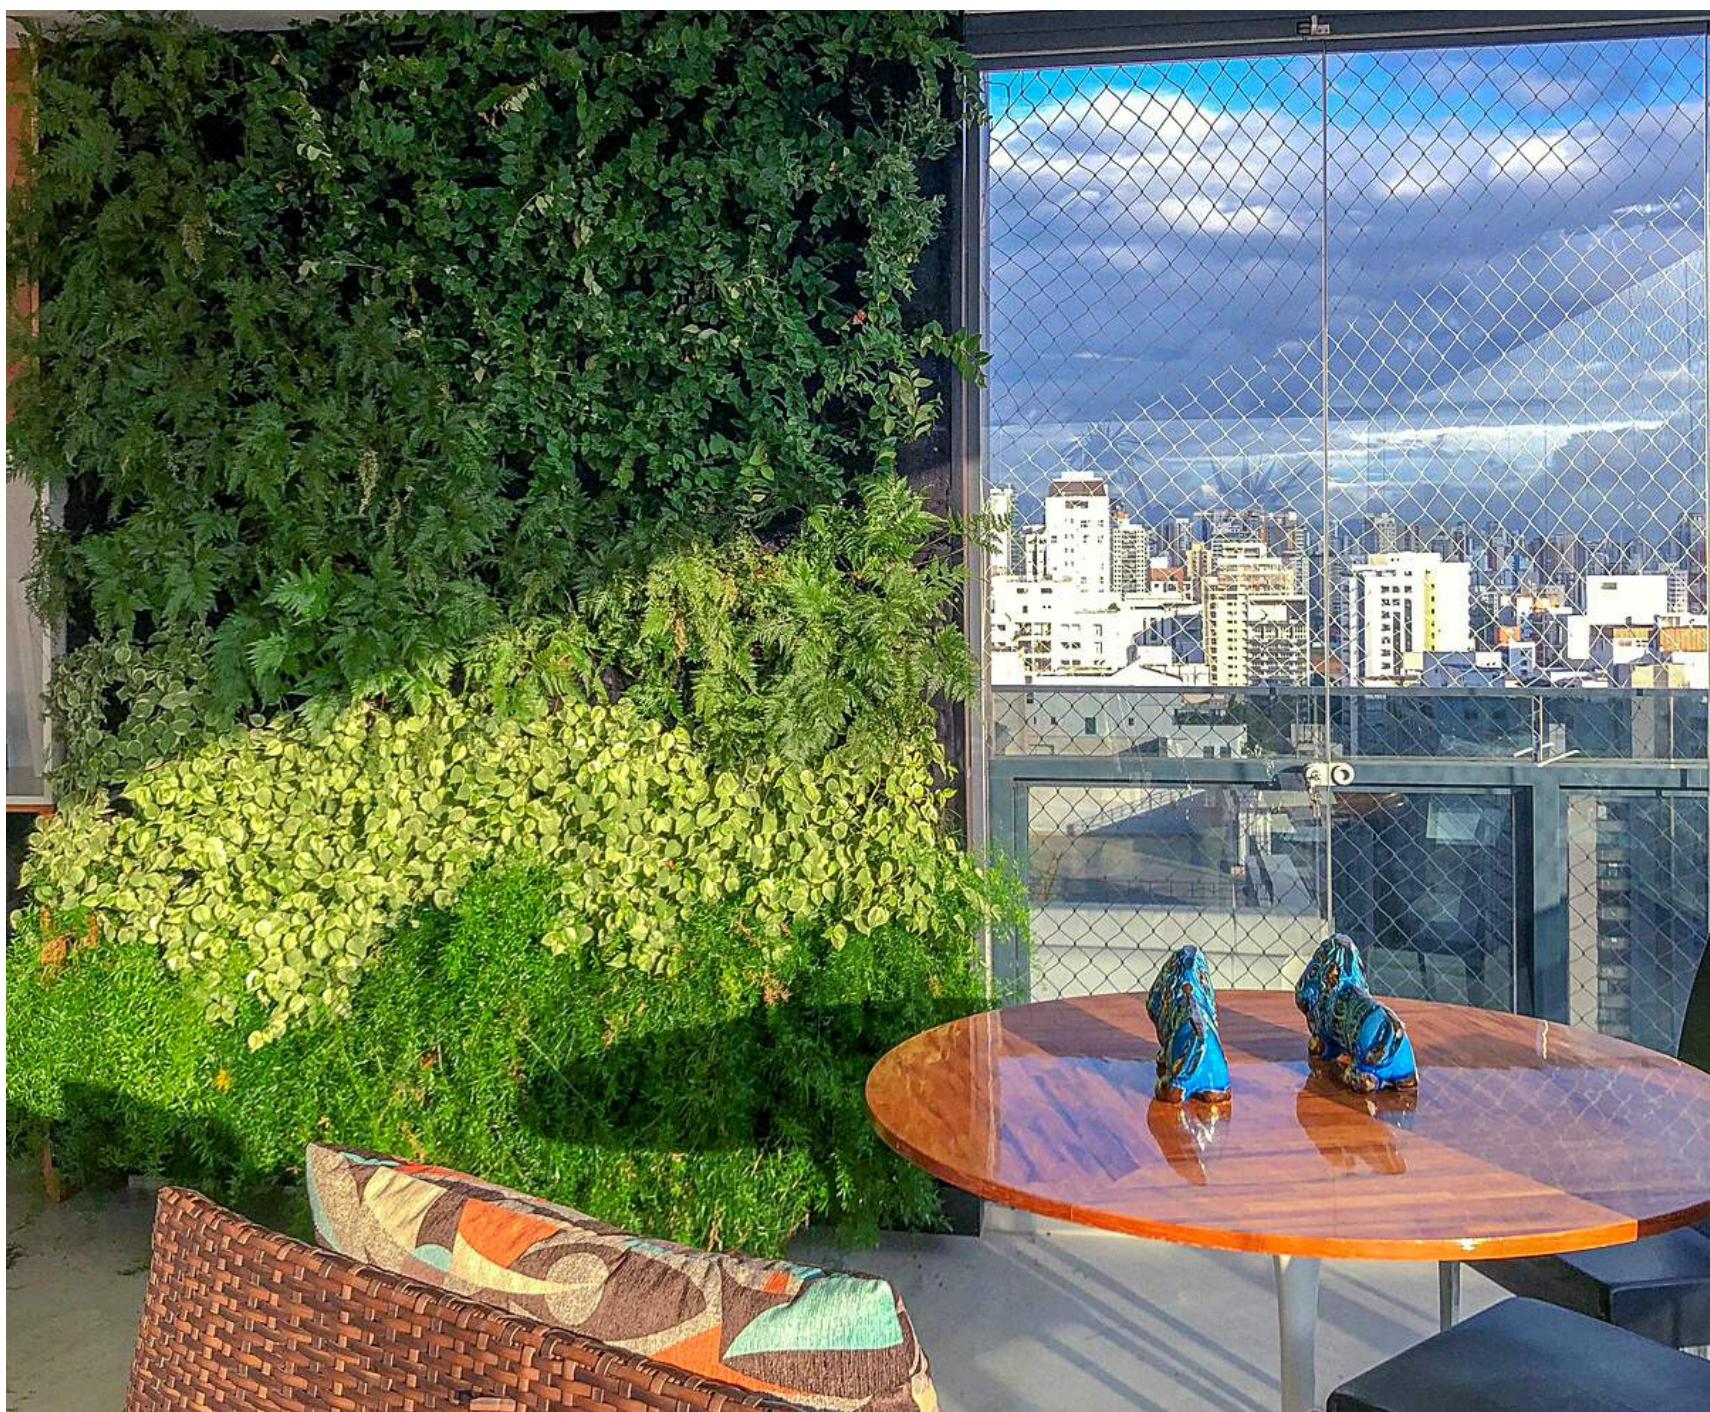

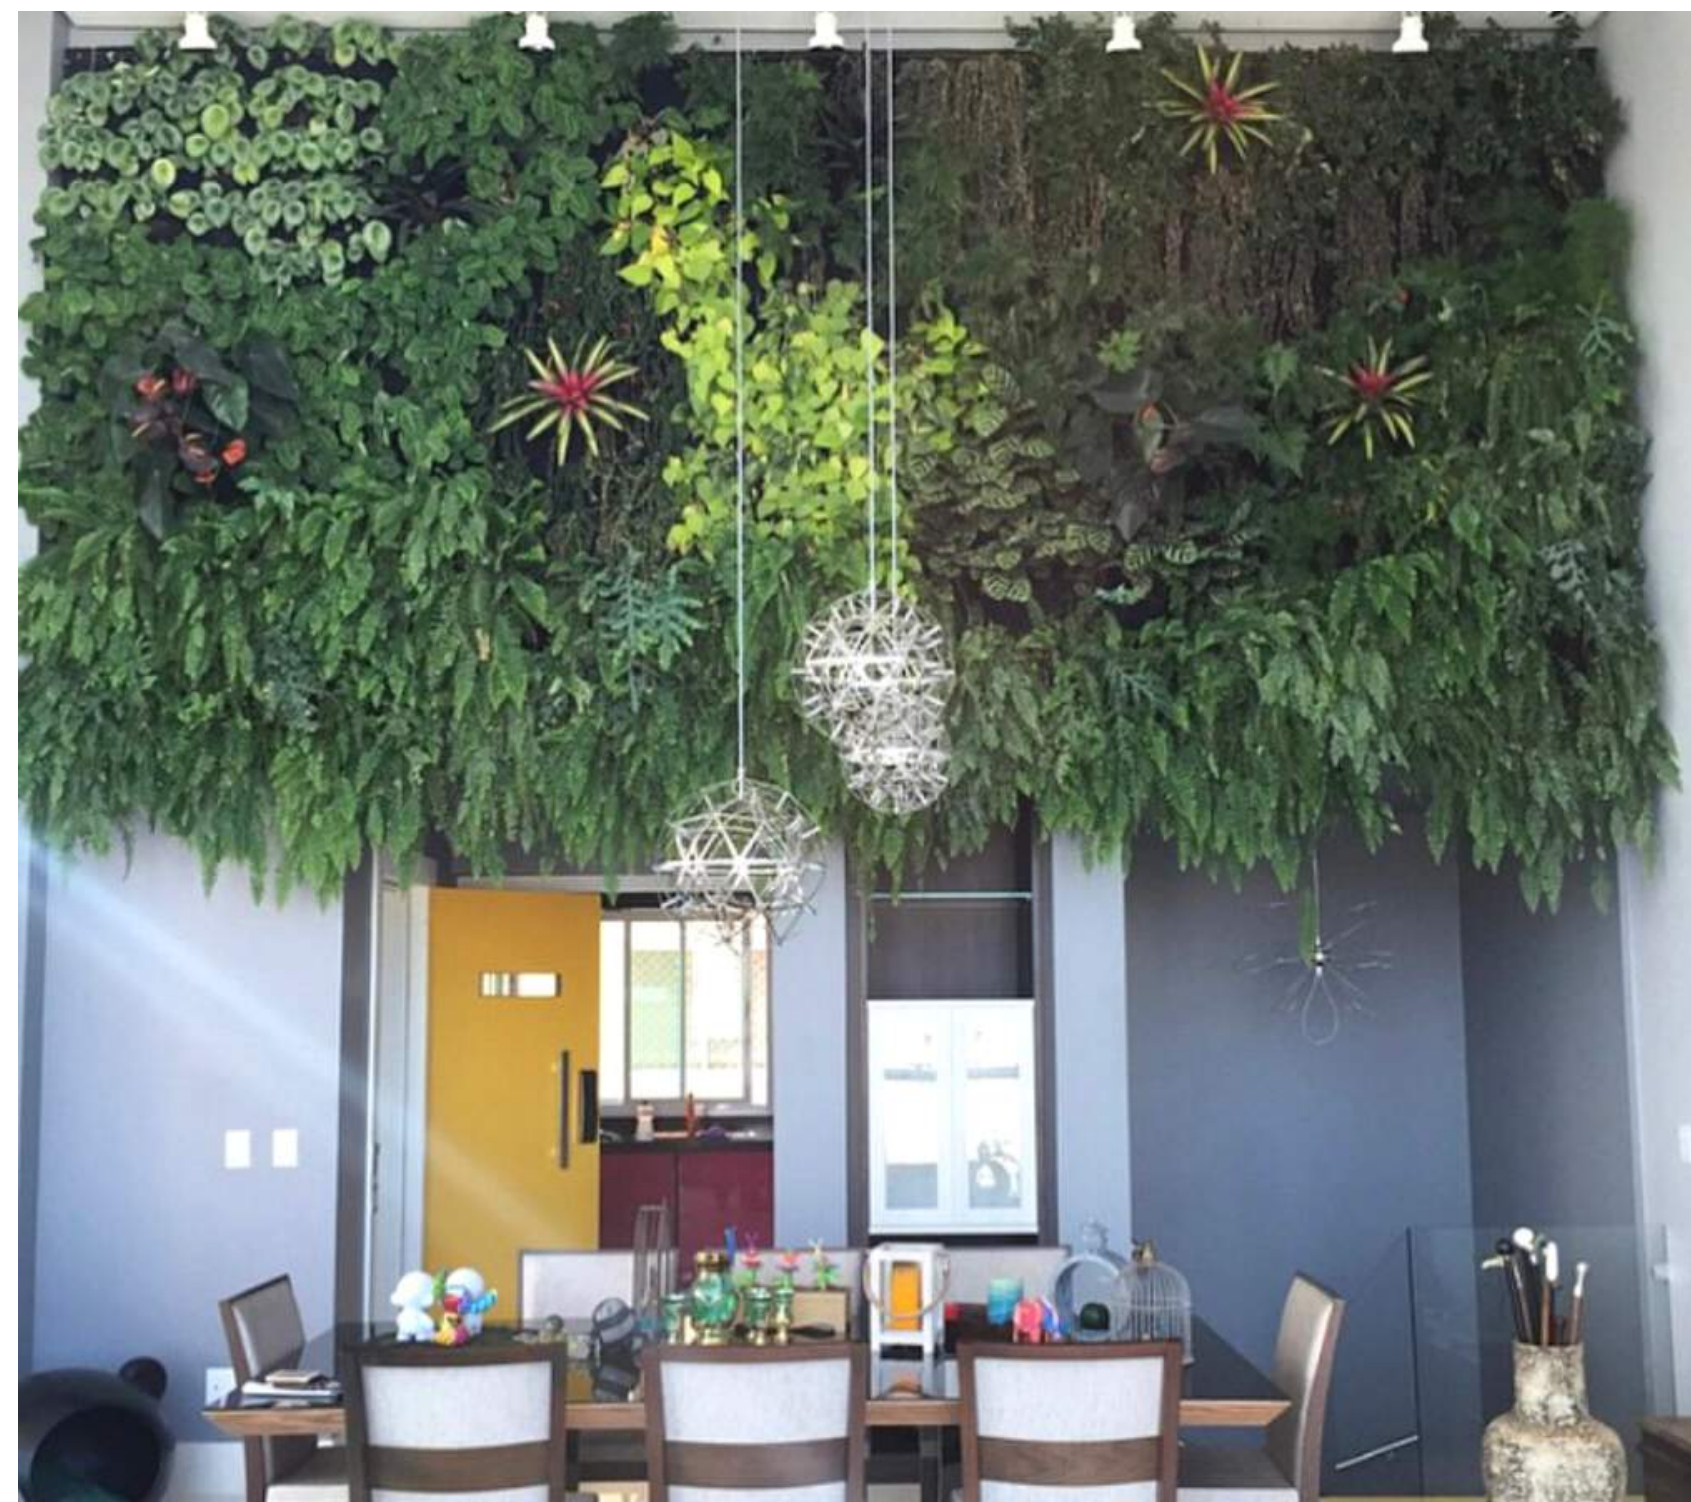

# MAINTENANCE

## PREVENTIVE AND EMERGENCY CARE

We understand that our relationship with customers does not end with the installation or delivery of products, which is why we offer weekly support and on-call weekends to provide periodic maintenance services, by appointment or emergency to solve any damage.

We work on the maintenance of all products sold by us and third parties, through a technical feasibility analysis.
